- 7 Flat through floor for ease of handling pallets.
- 8 Normally installed in one day by our trained service technicians.
- 9 Unit available right hand operation or left hand operation.
- 10 Unit also available with 270 deg. rotation at extra cost.
- 11 Electrically operated from single phase 240 volt 13 amp supply.

The motor-driven Rotary Bullion Hatch is designed for the bulk transfer of valuables from a non-secure to a secure area. Used by major UK and European banks.

Its operation is simple, safe and secure. The hatch is opened and closed by a controller in the secure area and the operational sequence is such as to prevent the entry of unauthorised personnel, whilst the hatch is in use. The mechanism is fitted with both audible and visual alarm systems.

Installation is easy, as the Rotary Bullion Hatch is a one piece unit and can be installed quickly and simply for your convenience. It has safety features such as hinged flaps on the closing face of the frame and is armoured to British Standard 5051 G2 level and Din Standard C3 Ballistic level and designed specifically for the bulk transfer of valuables from a non-secure zone to a secure one. This Motor Driven Rotary Bullion Hatch is ideal for major financial institutions handling sizeable loads on a regular basis. Able to accommodate Bank of England and Europallet coin cages, it is a system which is favoured by many UK high street banks. Full technical specification and drawings available on request.

In-House Design Our very experienced team is always available to assist and advise on installation and layout; detailed specifications and drawings are available for any products on request.

Advice on Security Our technical representatives are available for on-site visits to advise on security.

Quality - and durability The Company has established an enviable reputation for quality through its work for a wide range of customers which include the major national security organisations, the Bank of England, the Royal Mail, clearing banks, insurance companies, etc.

Dedicated to standards - and improvement

The Company maintains a policy of continuous improvement and equipment and materials are constantly tested to maintain and improve performance. We reserve the right to amend any part of the specification without prior notice.
