JOHNSON  
SECURITY

## ROTARY SYSTEM L TYPE

### DESIGN FEATURES

- 1 Unique split drum..
- 2 Ballistic protection to BS5051/1973, G2/S.
- 3 Simple single lever operation.
- 4 Operator safety ensured by careful drum design, providing ballistic overlap at all times.
- 5 Window with security flap to allow visual identification of customer.
- 6 Intercom with operator warning buzzer for customer/operator communication.
- 7 Easy and convenient to use as loading platform is at suitable height.
- 8 Quickly and easily installed.
- 9 Single phase 5 amp supply only required from standard 3 pin plug.

Manufactured to British Standard 5051 G2 Ballistic level and designed for the safe transfer of large quantities of coins and notes in bags.

The split drum design allows the hatch to be loaded on one side whilst unloading takes place on the other. This ensures fast, efficient transfer times.

The hatch accommodates all cash boxes and sacks in use with major banks and cash carriers and minimises cross pavement risk.

The hatch comes complete with a builtin electronically operated two way speech unit and is installed in a prepared aperture in a typical time of some two hours.

**In-House Design** Our very experienced team is always available to assist and advise on installation and layout; detailed specifications and drawings are available for any products on request.

**Advice on Security** Our technical representatives are available for on-site visits to advise on security.

**Quality - and durability** The Company has established and enviable reputation for quality through its work for a wide range of customers which include the major national security organisations, the Bank of England, the Royal Mail, clearing banks, insurance companies, etc.

**Dedicated to standards - and improvement** The Company maintains a policy of continuous improvement and equipment and materials are constantly tested to maintain and improve performance. We reserve the right to amend any part of the specification without prior notice.
